

Guiding You Through a Successful Server and IT Relocation

The Smart Person's Guide to a Successful Server and IT Relocation

When your business grows and undergoes change, sometimes an office move is inevitable. But the chaos and stress that can accompany any move is completely avoidable. Rather than relying on traditional moving companies who don't know how to properly handle your business IT equipment, you can trust Nerds Support to securely do all the prep, packing, and transporting for you.

We have a team of highly trained IT professionals who understand how fragile servers and other IT equipment can be. Our Nerds Support team will take the phrase "handle with care" to the next level by ensuring the proper deinstallation and reinstallation of all your office hardware and appliances during your IT relocation.

The Planning Stages

Just as you would plan meticulously before moving homes, you should prepare in advance before moving offices. And that means throwing out the old and bringing in the new. You're probably moving to a new space because your company is growing and changing, and that might indicate the time to switch to a new or upgraded IT infrastructure. Maybe you're ready to move from traditional phone lines to VoIP (voice over IP). Or perhaps you can speed up your internal processes by migrating your data and applications to the cloud. Whatever the case may be, our knowledgeable IT consultants at Nerds Support are here to help you determine and implement the most beneficial infrastructure plan for your business. With a secure and efficient IT relocation plan built around your company's needs and priorities, Nerds Support will provide you with quality services and consultation for a stress-free move.

Making Your IT Relocation Happen

When dealing with hardware and servers that store sensitive, business-critical information, it's important to do complete backup and recovery of all your data before unplugging and shutting things down. The worst case scenario is setting up a server in your new office space only to find out that all of your data has been damaged or lost. At Nerds Support, we begin the moving process with a comprehensive data recovery and backup plan to make sure that doesn't happen.

Nerds Support team will take the phrase “handle with care” to the next level by ensuring the proper deinstallation and reinstallation of all your office hardware and appliances during your IT relocation.

The next important step is properly de-installing each individual piece of IT hardware and every server. Not following the right protocols and practices for this step can lead to extreme risks such as data loss, hardware malfunction, or server destruction—things that can ultimately lead to longer business downtime. We catch any moving issues before they occur by following a precise deinstallation and shutdown process in order to have your business up and running again in no time.

FACT:

Working with the right professional team is the single biggest must-do for any company thinking of moving office. They will guide you through the process, save you money in the long run and also make sure you don't make any critical mistakes.

Out On the Open Road

Once your IT equipment is securely packed up and ready to go on the road, we'll follow through by re-racking and reinstalling everything back at your new destination. We'll be there for that last big hurdle to make sure your company can be up and running again as soon as possible with little downtime.

With careful planning and execution, our IT professionals at Nerds Support have your back for your next big move. Don't make the process of moving more stressful than it has to be. With our comprehensive and strategic server and IT relocation services, you can finally have a peace of mind knowing that we've got our business IT concerns covered.
